TECHNOLOGIES

Dear business partners,

VICTOR

HERE IT IS - THE 2ND VICTOR WORKBOOK FOR THE 2023/2024 SEASON.

I would like to take this opportunity to thank you once again for the great and successful cooperation in 2022 – it was a particularly challenging year for everyone due to the much-cited “turn of the times” and the global changes in the procurement of goods!

We have again put together an attractive range for 2023 – in the textile segment we are offering an additional series, alongside an expanded shoe collection and racket range.

Once again, we have optimised the availability of goods so that we can dispatch your orders within 24-hr as usual.

Nevertheless, we are not immune to the current economic challenges, such as significantly increased prices in purchasing, for energy and the import or export of our goods.

However, we have managed to avoid special price increases and have been able to improve the margins for you as our partner once again – the sea freight rates have currently stabilised and the current euro/dollar exchange rate means that our prices have only had to be marginally adjusted.

The issue of sustainability is still very high on our agenda. Since 2022, we have completely converted our vehicle fleet to e-mobility/hybrid drive, along with making our T-shirts from recycled PET bottles, as well as not using PVC covers for our rackets and much more!

We are particularly proud of our climate certificate (more informations on page 89) for our sea transports. The resulting CO2 emissions are offset via the project portfolio of Klimainvest Green Concepts GmbH.

The year 2023 will be a special one for the VICTOR brand, as we will be celebrating our 55th anniversary worldwide. There will be various special series and promotions throughout the year.

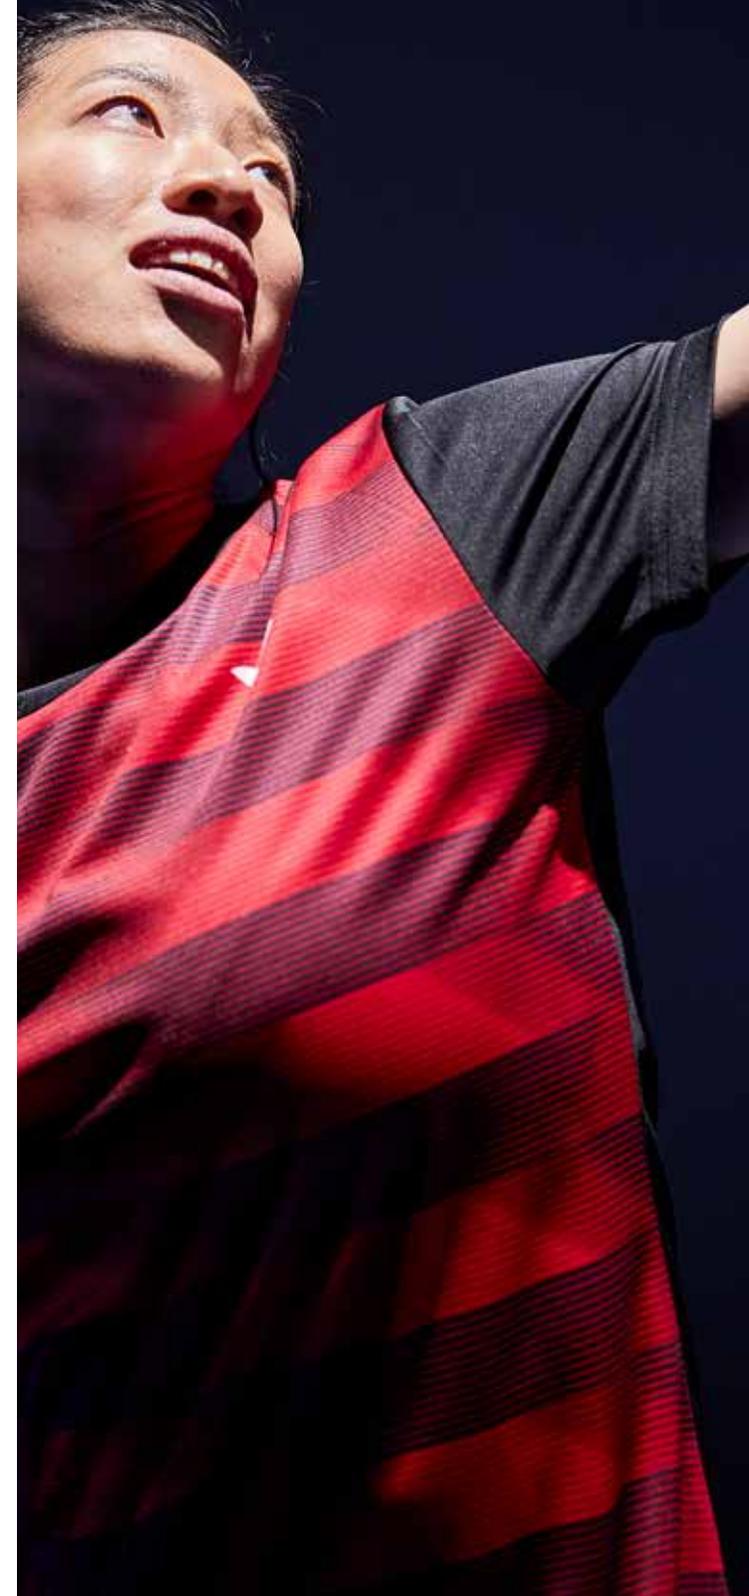

Here's to a successful year!

With sportive greetings,

Andreas Sievers
Managing Director

**OFFICIAL EQUIPMENT PARTNER
OF BWF MAJOR TEAM CHAMPIONSHIPS
2022-2025**

VICTOR will be the Official Equipment Partner of 2022 – 2024 Thomas and Uber Cup Finals and 2023 – 2025 Sudirman Cup.

„VICTOR is honored to be the Official Equipment Partner of the BWF Team Championships for 2022 – 2025. Sudirman Cup, Thomas Cup and Uber Cup are unique events where players fight for the team together. VICTOR is really excited and much looking forward to working with BWF and the players to provide the best team events to the fans around the world,“ said Jeff Chen, Chairman of VICTOR.

The BWF Thomas and Uber Cup Finals 2022 and 2024 will be held respectively in Thailand and China, while the BWF Sudirman Cup will be held in 2023 and 2025 in India and China.

Thomas Lund, BWF Secretary General, also expressed his excitement about the partnership with VICTOR. „We are extremely excited to partner with VICTOR for our Team Championships for the next four years. We look forward to forging strong partnerships with VICTOR to help us showcase world-class badminton tournaments across the world,“ said Lund.

WE DROP THE COVERS

In order to avoid plastic waste, we have decided to no longer include a cover with every racket as standard. Instead, we offer you the right case for every need in our assortment. Covers on page 70.

GRIP SIZE (CIRCUMFERENCE)

G 4 = 8,50 cm

G 5 = 8,10 cm

G 6 = 7,90 cm

WEIGHT CATEGORY*

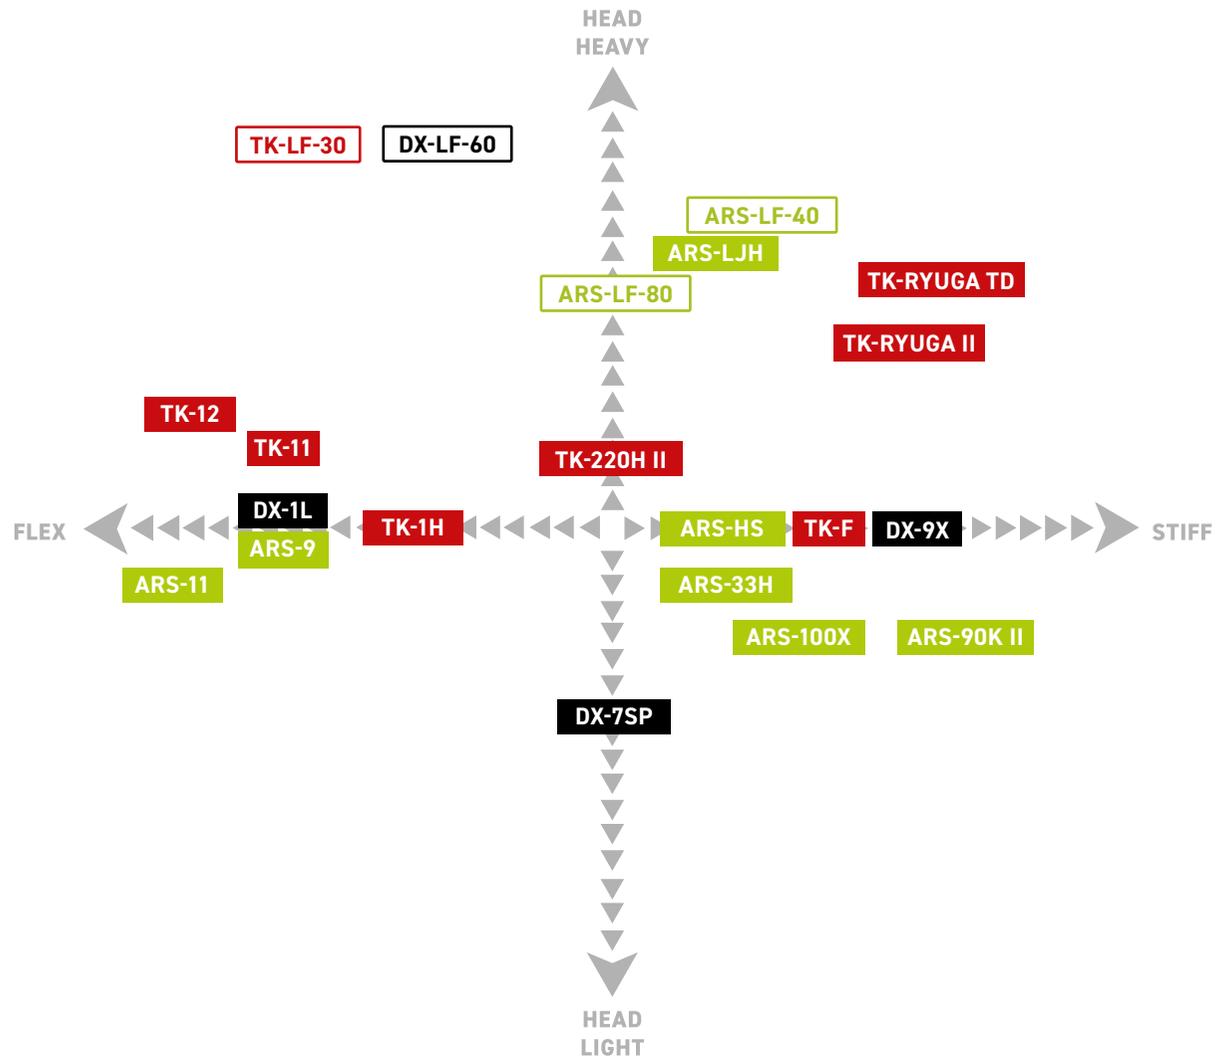

2 U = 90 - 94,9 g 3 U = 85 - 89,9 g

4 U = 80 - 84,9 g 5 U = 75 - 79,9 g

6 U = 70 - 74,9 g *without string

All badminton racket details with string and grip.

TK-RYUGA II

RACKET TYPES AND SERIES

SPEED IS THE FIRST STEP TO VICTORY

The SPEED type racket is light and can facilitate quick movement, allowing key opportunities to be grasped. This racket type is suitable for players who seek and rely on speed.

ATTACK IS THE BEST FORM OF DEFENCE

The POWER type racket delivers exceptional stability and power. This type of racket is for players who seek maximum power in their game.

PRECISION AND CONTROL

This stable and solid ALL-AROUND racket type gives excellent handling and is suitable for players seeking precision and control.

THRUSTER

Attack is the best form of defence and a fundamental base for victory. Experience a frame structure with stronger material, double reinforced for increased smash power and higher stringing tensions. The THRUSTER is well known for its powerful attacks, supplying your game with more speed and strength. Brace yourself for intense smashes and fast success.

The VICTOR squash ball enjoys a consistently high quality around the world. This is confirmed by the official WSF Certificate (World Squash Federation). Since 2014 our VICTOR squash ball double yellow has been used as a game ball in Austria and in Germany from Juli 2014 to June 2020. In 2017 the portfolio was complemented with a green squash ball for useage in regional higher altitudes and a white ball for glass courts. The other speeds (blue, red and yellow) are available in equal measure.

String Multifilament string
Material Ultra High Modulus Graphite

RRP 89,95 €

Technologies

WORKBOOK
2023/24

RACKET TECHNOLOGIES AND MATERIALS

Integrates R.T.C with high resilient modulus graphite material to enable swift and all-around rebound performance, redefining what a speed racket could be.

The box-shaped design effectively increases the stability and anti-torque, and can stand higher string tensions.

AERO-HEX

Using aerodynamics technology to transform traditional hexagonal frame with better airflow-directing and air-cutting performance, further achieving incredible stability and the smoothness of swings.

ULTRA-THIN FRAME

The Ultra Thin Frame is up to 7% thinner than traditional rackets to improve the swinging speed while maintaining the stiffness and anti-torsion.

NEW ULTRALIGHT FRAME

The light weight frame structure designed exclusively for 6U rackets enhances the strength and reduces the weight of the frame simultaneously.

Three different frame structures are rearranged and integrated to optimize the hitting, frame characteristics and overall performance.

Combining the controllability of diamond-shape structure with the stability and smoothness of sword-shape structure, the AERO-DIAMOND frame minimises air-resistance and improves handling stability during each game.

The elliptically-shaped section can decrease air resistance, provide higher anti-torque, maximize control and vastly increase the speed of a returning hit.

The recovery performance enhanced by high modulus material unleashes the shaft's elasticity potential and creates fast rebound.

This diamond-shaped design cuts through the air like a sword. It significantly reduces air resistance and provides a faster swing speed.

DYNAMIC-SWORD

DYNAMIC-SWORD features an inward-cutting frame structure in the 6/12 o'clock direction, and an outward-cutting frame structure in the 3/9 o'clock direction, which is designed to imitate the aerodynamics of a sword blade cutting through the air, making each swing swift and sharp.

R.T.C. technology, based on scientifically-designed structure and data analysis, introduces "reflection point" to the frame's key spots to maximise the "rebound" performance, effectively improving both the quality and speed of each swing.

The Whipping Enhancement System incorporates a softer material in a specific part of the shaft near the throat, enhancing racket-head acceleration in a "whipping" style which helps to create steeper and quicker attacks with satisfying control.

The innovative carbon fiber layering design has improved the antitorcion performance, further making the racket flex faster with better force transmission. As a redefinition of „whipping effect“, WES 2.0 allows the players to drive the shuttle at a sharp downward angle when attacking.

The smaller angle of twist in the shaft material is the key to an optimal power transmission and anti-torsion performance.

RACKET TECHNOLOGIES AND MATERIALS

Inspired by Helicopter rotor blade technology – the multilayered structure made of carbon fibre and composites, minimises material size and reinforces handling feel and performance.

The NANO TEC technology works by evenly distributing nano-sized particles in the vacant space between carbon fibre bundles; this increases the overall stiffness of the carbon composite fibres and reduces the distortion of the frame.

The integrated force of the shaft and FREECORE creates a sturdy handling and phenomenal elasticity.

CATAPULT STRUCTURE stores power and releases at smashing for maximum effect .

Based on multilayered carbon fibre, the advanced Fibre Reinforced System (FRS) not only improves elasticity, but also offers stable controllability with high tension string.

NANO TUBE has increased much bending force compare with conventional graphite. VICTOR imply above feature to offer racket present light & flexible response.

The compound frame design can be divided into three major parts: The upper section is made with a fan-shaped structure to lower wind resistance and accelerate each swing. The Compound-Sword structure in the middle section is designed to lighten the filler and enable fast rebound. Finally, the lower section is built in aerofoil structure to lower wind resistance and keep excellent anti-torsion performance in a "whipping" style which helps to create steeper and quicker attacks with satisfying control.

The adoption of the single-wall carbon nanotube (SWCNT) effectively enhances racket intensity, elasticity, and fatigue resistance. The light weight enhanced material enables both strength and smooth handling.

NANO FORTIFY FR carbon fiber is adopted as the material of choice to bring out both strength and durability. The high-modulus frame structure allows a better control of direction and also makes the racket much more durable.

Designed by computer simulation and aided with the adoption of injection moulding technique, this revolutionized handle style allows the shaft to move more freely, which can not only make swings smoother but also improve overall handling experience.

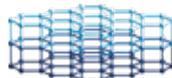

Built on the strengths of the NANO FORTIFY TR, the NANO FORTIFY TR+ is engineered with an advanced, more durable carbon-fiber that is firm but offers pleasing resilience and feeling.

A breakthrough from traditional hexagonal frame—different types of frame structures are integrated into the upper, middle, and lower parts of the frame based on the racket setting to optimize stability and swing smoothness.

PYROFIL

PYROFIL carbon fibre is advanced high-performance and ultra light material from Japan. It offers excellent shock absorption and enhances handling in every single game.

Introducing highLy resilient and durable glass fiber into the multilayered design of the frame to provide better elasticity and comfort while hitting.

TECHNOLOGIES SHOES

HYPEREVA

VICTOR HYPEREVA is the latest developed midsole technology that focuses on resilience and cushioning. It's well known for incredible softness, shock-absorption, rebound performance, and how it makes the shoes both durable and lightweight. Badminton shoes built with HYPEREVA can achieve better lightweightness, elasticity, and stability than before.

JACQUARD EM

The three-layered structure enables the Jacquard EM to deliver flexible durability, perfect fit, and incredible breathability. The upper layer is soft and low stretchable MONO mesh; the bottom layer is soft, light, and breathable mesh. The upper and bottom layers are joined perfectly by the PUR gluing technique on the middle layer to achieve great softness and breathability.

V/-Durable⁺

In addition to the reliable V-Durable, the inner surface of the toe is equipped with protective coatings and a wear-resistant layer for enhanced endurance.

ENERGYMAX

The shock absorbing ENERGYMAX system is well known for providing comfortable support during fast movements and directional changes.

ENERGYMAX3.0

The new generation of highly elastic material, increases rebound ability and strengthens shock absorption.

V/-Tough

The inner surface of the toe is made of super wear-resistant material which greatly improves the durability and resilience of the shoe.

ENERGYMAX V

Improves the shock absorption on the heels when striding forward. Strengthens the rebound ability of the heels during speedy defense. The shock absorbability is increased by 27%, and the bounce power is raised by 30%.

EVA Feather Resilient

EVA Feather Resilient not only preserves excellent elasticity, but also improves the lightweightness by 20% compared to traditional midsole, helping relieve leg muscle strain and making swift movement easier and faster.

Breathing

A unique breathing mesh layer on the side of the shoe is used to increase ventilation creating a more comfortable environment for the feet.

Resilient EVA

Highly resilient midsole material is more durable and retains its shape better. It not only provides basic stability and shock absorption, but also increases flexibility and the reaction time while changing direction.

Light Resilient EVA

New, highly resilient and durable midsole. It improves the life-span of shoes, reduces weight, increases flexibility and lowers muscle burden during intensive exercises, which allows one to make agile movements quickly.

LS-S

The outside of the forefoot is designed using high-strength TPU. This significantly enhances the lateral stability during intense and rapid transfer of direction.

NEO DUPLEX

Joint-friendly combination of ENERGYMAX 3.0 on top and light resilient EVA sole beneath by the special biomechanical layout of these cushioning layers.

VSE ANTI-SLIP

The drop-in-midsole footbed is made with unique anti-slip foam material integrated with midsole, delivering better anti-slip performance and elasticity than general insoles.

VSR ANTI-SLIP

With this upgraded outsole rubber, slip-resistant performance increases on dry PU floor.

TECHNOLOGIES SHOES

The three-dimensional carbon fiber sheet provides midsole stability and decreases torsional strain on the foot's arch.

The V-shaped square design allows a light weight and minimized landing area, while providing the anti-slip for vertical and lateral movement. This gives you more responsive and agile footwork while providing additional durability.

SHAPE ICONS

Designed to Reduce excess space of front shoe for Greek-type-toes.

Creates more comfort and firm responses to the Egyptian-type-toes.

Designed for a better fit based on the female foot shape.

Made with polyurethane granular material, E-TPU has excellent resilience and deformation recovery ability once foam molded, making it not easy to deform for long time wearing. E-TPU provides a comfortable, shock-absorbing, and elastic wearing experience, which is significantly better than traditional EVA Material.

NON MARKING SOLE

All VICTOR shoes are equipped with a NON MARKING SOLE. So you can be sure not to leave any unsightly marks on the floors.

The Tri-Arch support control is an arch design of the footbed based on the three arches of the foot: medial and lateral longitudinal arches and transverse arch. Tri-Arch is ergonomically designed to keep the original curvature of the three arches, which offers a more comfortable support to the sole, evenly distributes the pressure, and enables better controllability.

The composite materials generated from PU Molding technology give the shoe added durability in the toe area as well as added grip.

Drop-in-midsole combined insole with midsole, not only increase its durability, but also provide more comfortable and nice support to the longitudinal and transverse arches.

BAG AND TEXTILE ICONS

-  Racket compartment
-  Shoe compartment
-  Compartment for dirty clothing
-  Trolley function
-  Compartment for clean clothing
-  Functional front pouch
-  Space for shuttles
-  Swivel Strap System
-  Shoulder strap
-  Airflow-mesh
-  PerfectDry / sweat absorbing
-  Min. 2 years availability
-  Kids Sizes (140, 152, 164)
-  Inherently stable
-  Breathable
-  Evolutionary speedy drying
-  Recycled fabric

CERTIFICATIONS

Environment protection & working conditions - partner and certifications of VICTOR

For decades, VICTOR stands for sporting expertise and innovative, high-quality products. Environmental compatibility and sustainability are in the focus as well as questions about skin compatibility, life cycle assessment and recyclability of materials and end products.

VICTOR therefore works together with the Hansecontrol company on sensitive, relevant product groups. Suppliers are put through their paces and must either comply with the BSCI standard or be supervised by SGS, TÜV Rheinland or other testing institutes that vary regionally.

Product testing for purity, contaminants and safety

Oeko-Tex® Standard 100 is a worldwide equal test and certification system for textile.

Environment and labour protection

Klimainvest – is a TÜV-certified company that supplies energy suppliers with green electricity and climate-neutral green gas and supports companies on their way to climate neutrality.

VICTOR saved in 2022 23.14 tonnes of Co2 emissions.

WE SAVE PLASTIC IN EVERYDAY LIFE:

Plastic bottles are no longer used in our office. But we prefer to put them into our shirts!

WE DROP THE COVERS

In order to avoid plastic waste, we have decided to no longer include a cover with every racket as standard. Instead, we offer you the right case for every need in our assortment.

100% RECYCLED

Since 2020, we have been investing in the conversion of Teamline from conventional material to recycled material.

CONVERSION TO HYBRID/ELECTRIC FLEET

Almost all company cars have already been replaced with hybrid or electric cars.

NO FOILS IN PRINT

For print products, we use certified paper and do not refine them with films. We also try to keep the print runs low.

SAVING ENERGY

Our new European Head Office building complies with the KfW standard. This means we use as little energy as possible in the office.

PAPER FREE OFFICE

We are on a very good track.
